EVENT CASCADE AGENT

Ripple

One change in, every dependent task updated.

Lisa Wilder · Girl Develop It Hackathon · November 2026

THE TEAM

Lisa Wilder

Solo builder: product, AI extraction and cascade engine

Lived the problem

Ran member and event management at the Colorado BioScience Association: logistics, vendors, Salesforce and Blackthorn Events.

Building the fix

Applied Computer Science post-bacc at CU Boulder and the Break Through Tech AI program.

Built this week

Claude-powered fact extraction with quoted sources, a rule-based cascade engine and a review screen.

HOW CONFIDENT IS RIPPLE?

Every test passes on the demo event

29/29

Facts extracted

Across all 9 sample sources

0

False changes

Nothing flagged that hadn't changed

39/39

Quotes verified

Each cited sentence is word for word in its source

39/39

Cascade checks

Rule tests, no AI; 32 tasks flagged end to end

What this does and doesn't show: the 9 sources are hand-written samples (contract, emails, a call transcript, a catering quote, a newsletter). They prove the pipeline works end to end; real inboxes will be messier, so a larger eval on real emails is next.

NEXT STEPS

From demo to the planner’s inbox

1 **Connect real sources**

Feed Gmail and Zoom (or another note taker) straight in, so no one pastes anything.

2 **Work where planners work**

Agent-first: create and update tasks in Asana behind the scenes instead of another app to check.

3 **Learn across events**

Org-wide considerations, so a lesson from one event (a snowstorm) flags on the next when facts change.

4 **Test on real, messy email**

Grow the eval beyond 9 samples and pilot with planners to see if it's worth paying for.
